

Essential information for essential air travel

In response to COVID-19, the Canadian Air Transport Security Authority (CATSA) has made several changes at security screening to ensure a safe, secure screening experience before you board your flight.

Before you leave for the airport:

Ensure you have a multi-layer face covering to bring to the airport.

Follow the rules for liquids, aerosols and gels. You can now bring one bottle of hand sanitizer up to 355 ml in addition to any 100 ml containers in your carry-on bag.

When you arrive at the checkpoint:

Do not enter the checkpoint if you exhibit known COVID-19 symptoms.

Wear a face covering.

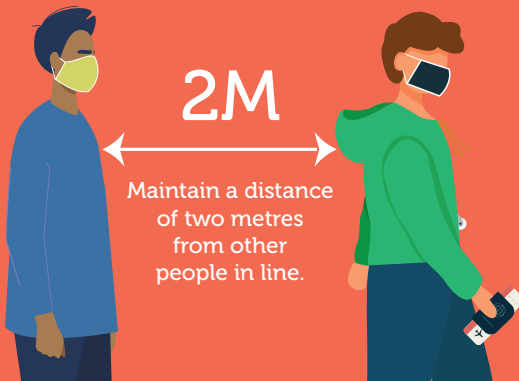

Sanitize your hands if you can. Extra hand sanitizer dispensers have been placed at the checkpoint.

If you're flying out of one of Canada's 15 busiest airports, you will have your temperature taken before entering the screening line.

While in line:

You'll be asked to scan your own boarding pass or other document of entitlement.

Place small electronics and loose items in your carry-on or purse instead of a bin to reduce touchpoints.

During screening:

All screening officers will be wearing gloves and face coverings. Some will also wear face shields.

Gloves are changed when soiled, torn, before a physical pat-down or bag search, and upon request.

Explosive trace detection swabs are changed with every use.

Checkpoint cleaning:

We have put enhanced cleaning procedures in place, including increased bin-cleaning frequency and the use of strong anti-viral cleaning products throughout the checkpoint.
